

Galvalume Plus Disclaimer

The Galvalume coating process is likely to result in variances in spangle (size, number, and reflection) from coil to coil which may result in noticeable shade variations. Galvalume is also subject to variable weathering due to the acrylic coating installed at the finisher. Panels may appear to be different shades due this weathering characteristic. If a consistent and uniform appearance is required, Brinkmann Quality Roofing recommends, at customer's expense, upgrade to a pre-painted panel such as Preweathered Galvalume. Shade variation in panels roll formed from Galvalume Plus coated material do not diminish the structural integrity of the product. These shade variations should be anticipated and are not a cause for rejection. Brinkmann Quality Roofing accepts no responsibility for any discoloration or staining prior, during, or after installation or for uneven weathering, all of which are normal characteristics of this product. We do not recommend the use of satin finish galvalume products.
